Paper 5 Planning, Analysis and Evaluation

**May/June 2024****MARK SCHEME**

Maximum Mark: 30

---

**Published**

---

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the May/June 2024 series for most Cambridge IGCSE, Cambridge International A and AS Level and Cambridge Pre-U components, and some Cambridge O Level components.

---

This document consists of **9** printed pages.

Question	Answer	Marks
1	<b>Defining the problem</b>	
	<i>t</i> is the independent variable and $T_c$ is the dependent variable <b>or</b> vary <i>t</i> and measure $T_c$	1
	keep $T_R$ <u>constant</u>	1
	<b>Methods of data collection</b>	
	labelled diagram of workable experiment including: <ul style="list-style-type: none"> <li>solid cylinder cooling</li> <li>insulation surrounding all of the cylinder</li> <li>thermometer touching cylinder inside insulation</li> <li>insulation and thermometer labelled</li> </ul>	1
	method to heat the cylinder uniformly, e.g. place in oven/immerse in hot water <b>or</b> diagram showing cylinder in oven or hot water	1
	method to determine time <i>t</i> , e.g. stopwatch or temperature sensor connected to a data logger	1
	method to measure <i>L</i> e.g. use a ruler/calipers/micrometer <b>and</b> method to measure <i>d</i> e.g. use calipers/micrometer	1
	<b>Method of Analysis</b>	
	plot a graph of $\ln(T_c - T_R)$ against <i>t</i> or equivalent	1
	$U = -\frac{mc \times \text{gradient}}{A}$	1
	$Z = e^{\text{y-intercept}}$	1

Question	Answer	Marks
1	<b>Additional detail including safety considerations</b>	<b>6</b>
	D1 precaution to <u>prevent burns</u> or use of <u>hot cylinder</u> / <u>oven</u> / <u>hot water</u> e.g. use of gloves, use of tongs	
	D2 keep thickness of the insulating material constant (for each $T_c$ )	
	D3 method to measure $m$ , e.g. use a (top-pan) balance	
	D4 for water bath/oven methods, wait for initial temperature of the cylinder to become <u>uniform</u> or <u>constant throughout the cylinder</u>	
	D5 (surface) $A = \pi dL + \frac{\pi d^2}{2}$ <b>or</b> $\pi dL + 2\left(\frac{\pi d^2}{4}\right)$	
	D6 repeat measurements of $d$ <u>along the length</u> of the cylinder / in <u>different directions</u> <b>and</b> determine the average value of $d$	
	D7 description of how $c$ is determined from a separate experiment by heating the cylinder using electrical heater <b>and</b> $c = \frac{\Delta E}{m\Delta\theta}$	
	D8 method of determining energy supplied to electrical heater to determine $c$ , e.g. use of joulemeter for $\Delta E$ or electrical method using ammeter and voltmeter to determine $IVt$	
	D9 use several temperature sensors <b>and</b> determine the average $T_c$	
	D10 relationship valid <u>if</u> a straight line is produced (with $y$ -intercept = $\ln Z$ ) Do not accept line passing through the origin.	

Question	Answer	Marks														
2(a)	$\text{gradient} = -\frac{1}{kf_s}$ $y\text{-intercept} = \frac{1}{f_s}$	1														
2(b)	<table border="1" style="margin-left: auto; margin-right: auto;"> <tr> <td><math>v / \text{ms}^{-1}</math></td> <td><math>\frac{1}{f} / 10^{-3} \text{Hz}^{-1}</math></td> </tr> <tr> <td><math>3.5 \pm 0.4</math></td> <td>1.118 or 1.1183</td> </tr> <tr> <td><math>6.3 \pm 0.4</math></td> <td>1.110 or 1.1096</td> </tr> <tr> <td><math>8.7 \pm 0.5</math></td> <td>1.101 or 1.1013</td> </tr> <tr> <td><math>11.4 \pm 0.5</math></td> <td>1.092 or 1.0919</td> </tr> <tr> <td><math>13.9 \pm 0.6</math></td> <td>1.083 or 1.0827</td> </tr> <tr> <td><math>16.2 \pm 0.6</math></td> <td>1.074 or 1.0739</td> </tr> </table> <p>Values of <math>v</math> and <math>\frac{1}{f}</math> correct as shown above.</p>	$v / \text{ms}^{-1}$	$\frac{1}{f} / 10^{-3} \text{Hz}^{-1}$	$3.5 \pm 0.4$	1.118 or 1.1183	$6.3 \pm 0.4$	1.110 or 1.1096	$8.7 \pm 0.5$	1.101 or 1.1013	$11.4 \pm 0.5$	1.092 or 1.0919	$13.9 \pm 0.6$	1.083 or 1.0827	$16.2 \pm 0.6$	1.074 or 1.0739	1
$v / \text{ms}^{-1}$	$\frac{1}{f} / 10^{-3} \text{Hz}^{-1}$															
$3.5 \pm 0.4$	1.118 or 1.1183															
$6.3 \pm 0.4$	1.110 or 1.1096															
$8.7 \pm 0.5$	1.101 or 1.1013															
$11.4 \pm 0.5$	1.092 or 1.0919															
$13.9 \pm 0.6$	1.083 or 1.0827															
$16.2 \pm 0.6$	1.074 or 1.0739															
	Uncertainties in $v$ correct as shown above.	1														
2(c)(i)	<p>Six points from (b) plotted correctly. Must be within half a small square. Diameter of points must be less than half a small square.</p>	1														
	<p>Error bars in <math>v</math> plotted correctly. All error bars to be plotted. Total length of bar must be accurate to less than half a small square and symmetrical.</p>	1														

Question	Answer	Marks
2(c)(ii)	<p>Straight line of best fit drawn.            Do not accept line from top point to bottom point.            Line must pass between (14.5, 1.080) and (14.9, 1.080) <b>and</b> between (4.5, 1.115) and (4.8, 1.115).</p>	1
	<p>Worst acceptable line drawn (steepest or shallowest possible line that passes through all the error bars).            All error bars must be plotted.</p>	1
2(c)(iii)	<p>Gradient determined with clear substitution of data points into <math>\Delta y / \Delta x</math>.            Gradient must be negative.            Distance between data points must be greater than half the length of the drawn line.</p> <p>Gradient determined of worst acceptable line with clear substitution of data points into <math>\Delta y / \Delta x</math>.</p> <p>uncertainty = (gradient of line of best fit – gradient of worst acceptable line)  <b>or</b>            uncertainty = <math>\frac{1}{2}</math> (steepest worst line gradient – shallowest worst line gradient)</p>	1
	<p>y-intercept determined by substitution of correct point with consistent power of ten in <math>m</math> and <math>y</math> into <math>y = mx + c</math>.</p> <p>y-intercept of worst acceptable line determined by substitution into <math>y = mx + c</math>.</p> <p>uncertainty = y-intercept of line of best fit – y-intercept of worst acceptable line  <b>or</b>            uncertainty = <math>\frac{1}{2}</math> (steepest worst line y-intercept – shallowest worst line y-intercept)</p> <p>Do not accept ECF from false origin method.</p>	1

Question	Answer	Marks
2(d)(i)	<p><math>f_s</math> determined using <math>y</math>-intercept <b>and</b> <math>f_s</math> given to 2, 3 or 4 significant figures <b>and</b> <math>k</math> given to 2 or 3 significant figures.</p> $f_s = \frac{1}{y\text{-intercept}}$	1
	<p><math>k</math> determined using gradient with method shown <b>and</b> <math>f_s</math> <b>and</b> <math>k</math> given with SI units with appropriate powers of ten.</p> $k = -\frac{y\text{-intercept}}{\text{gradient}} \quad \text{or} \quad k = -\frac{1}{\text{gradient} \times f_s}$ <p>Units of <math>f_s</math>: Hz Units of <math>k</math>: <math>\text{m s}^{-1}</math></p>	1
2(d)(ii)	<p>Percentage uncertainty in <math>k</math> with method shown.</p> $\text{percentage uncertainty} = \left( \frac{\Delta y\text{-intercept}}{y\text{-intercept}} + \frac{\Delta \text{gradient}}{\text{gradient}} \right) \times 100$ <p>or</p> <p>correct substitution for max/min methods.</p>	1
2(e)	<p><math>v</math> determined (non-zero) to a minimum of 2 significant figures from (c)(iii) and (c)(iv) or (d)(i) with correct substitution.</p> $v = \frac{\frac{1}{f} - y\text{-intercept}}{\text{gradient}}$ <p>or</p> $v = k - \frac{kf_s}{f}$	1
